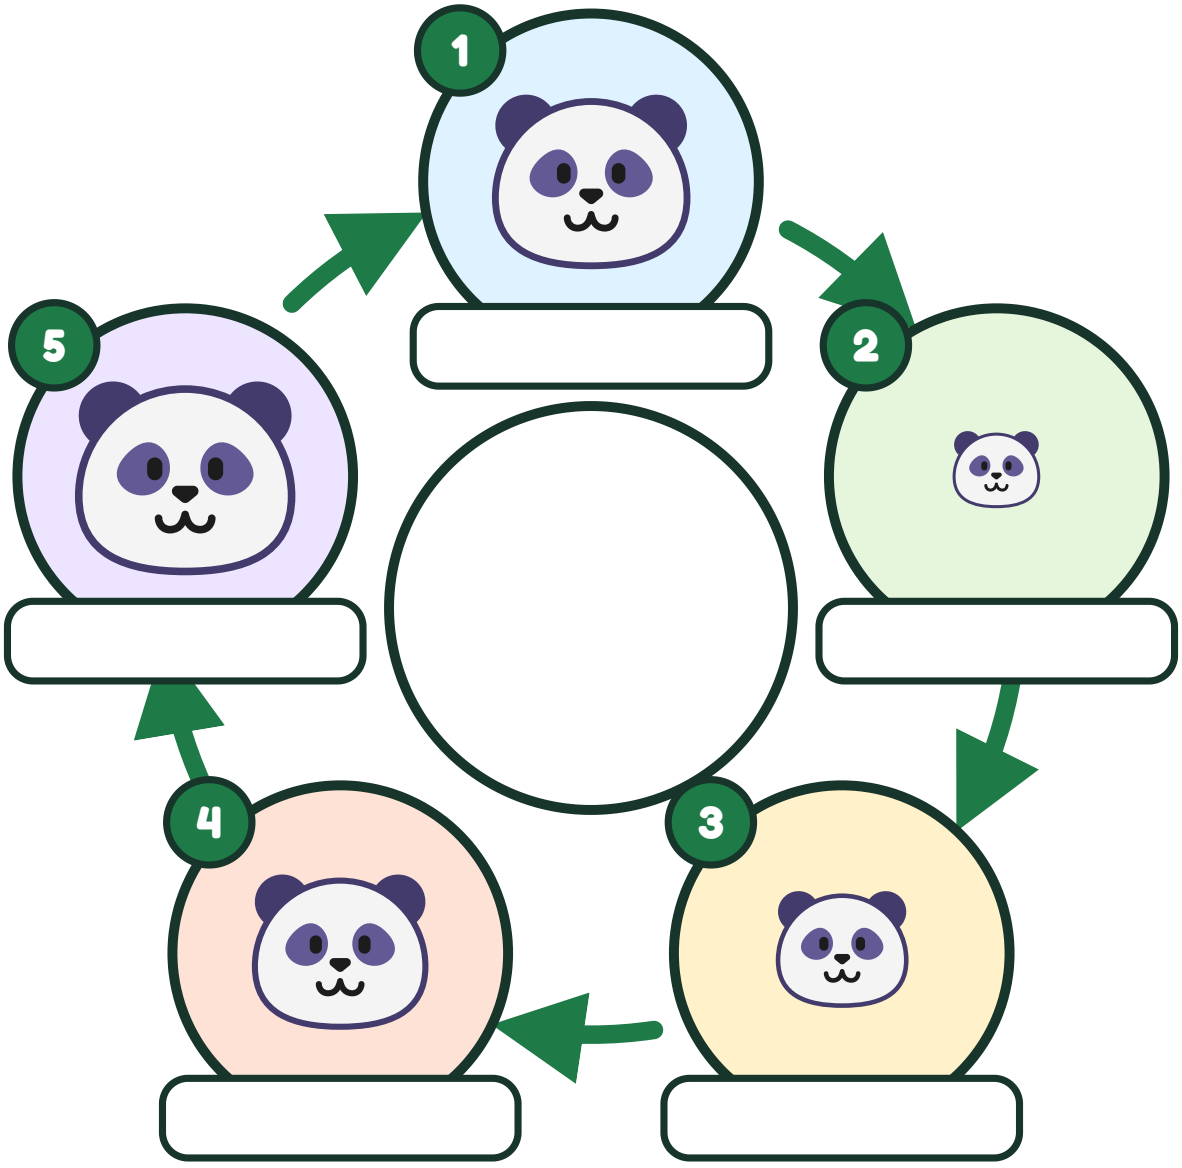
Label the Panda Life Cycle

Write the name of each stage in the empty boxes.

Name: _____ Date: _____



Word bank

Adult • Growing cub • Newborn cub • Pregnancy • Young panda

Which stage comes right after **Pregnancy**? _____

Cut and Sequence

Cut out the cards and put the panda life cycle in order. ✂

Name: _____ Date: _____

Pregnancy
Lasts about 3 to 5 months after spring mating.

Growing cub
Eyes open at 6–8 weeks; walks at about 3 months.

Young panda
Learns to eat bamboo; leaves mom at 1.5–3 years.

Adult
Ready to breed at about 4 to 7 years old.

Newborn cub
Pink, blind and about 3 to 5 ounces.

Match the word to its meaning

1. cub ____	A. a baby panda
2. delayed implantation ____	B. the area where an animal lives and finds food
3. weaned ____	C. no longer drinking its mother's milk
4. home range ____	D. when a tiny embryo waits before it starts to grow

Glue your cards in order on another sheet and draw arrows between them.
